
Alfonso Loaiza - Software Engineer

Zumba 5115, Mérida, Venezuela

Mérida State, Los Andes - (58) 424 7909696

tangs8140@gmail.com - <https://linkedin.com/in/alfonso-loaiza-rodriguez>

SKILLS

- Software engineering.
- Web, Mobile, and Desktop Development.
- Backend, C# - ASP.NET Core, Web API.
- Frontend Angular, typescript, Ionic, Capacitor y Unit Test, RxJS.
- SOLID principles, Clean code, Continuous Integration (CI/CD).
- Modular programming, focusing on components, objects, events and reactivity.

EXPERIENCE

worldsacross.com, Argentina - Software Engineer

July 2023 - June 2024

- Evaluation of the old worldsacross.com platform
- Design a plan to update worldsacross.com to new technologies.
- Use of agile methodologies for the agile and record-time development of a minimum viable product (MVP).

Application development using Google Angular and the Laravel Framework along with PHP for the backend.

- The company was able to update its platform by offering a revamped iOS & Android app and a new look and feel for its website.

fullcertificate.com, Venezuela - Software Engineer

December 2019 - November 2022

- Development of a voting app that detects pen marks on scanned sheets of paper, detects the decision made by the (anonymous) voter and processes the vote, sending it to a digital reception tray.
- Development of a web app that manages large communities, connected to the voting system.
- Development of a web app that allows delegating the vote to the community.

-
- Design Addon for Google Chrome, using Manifest V2 and V3 that captures images and video from the browser for certifications.

interfell.com, Venezuela - Software Engineer

November 2018 - August 2019

- QA tester responsible for reporting logical errors on GitHub regarding the Ticopay electronic invoicing system.
- He had the opportunity to learn the development ecosystem of a production system with continuous integrations.

EDUCATION

Santiago Mariño Polytechnic University Institute.

Software Engineering, Sept 2008 - Sept 2014 - Venezuela.

ACKNOWLEDGMENTS

Android Manifest 1.0

Memory Stack Management:

1. Modelo First in - First Out (FIFO).
2. Modelo First in - Last Out (FILO).

Creator of the "free to access", "Free to play" business model that allows you to obtain leads (engage) by offering limited access to apps.

Pen mark recognition engine (PMR). The application received recognition from judges in Spain.

The main challenge was to research open-source solutions for processing scanned document images. After evaluating several projects, I integrated and optimized a processing engine capable of analyzing and interpreting voting records.

The system accurately identifies the direction of the vote (in favor, abstention or rejection) by analyzing pen marks in specific fields, automating the storage of the results in a digital receiving tray.
